

Individual production lines: Faster, more compact and even safer in production.

#### **ABOUT HINTERKOPF**

From its beginnings in 1962, the family run enterprise has become the world leader in machines and materials for the production and decoration of cylindrical hollow bodies – a success story!

Ingenuity, hard work and striving for continuous improvement are the basis for the success of the medium-sized family owned company located in southern Germany, between Stuttgart and the Swabian Alb.

High-tech designed by Hinterkopf engineers, reliability and flexibility characterise the Hinterkopf modular system concept. This allows the customer in the packaging industry to react optimally and quickly to changing market demands.

The basic machines, replacing the robot, printing and lacquering units, capping machines, necking and trimming machines, washing machines, accumulators and various special machines are the elements of the Hinterkopf product range.

The necking machine N50.3 from Hinterkopf with its 50 working stations opens up entirely new possibilities for shaping.

## INDIVIDUALLY ADAPTED PRODUCTION LINES

From project planning to commissioning of their production line customers all over the world trust in operation – you can profit of it, too!

As each customer is different and has different needs, we adapt each production line to the individual 

If you choose Hinterkopf as a general contractor you requirements – and not vice versa. In one case special communicate with only one partner. This particularly technical demands must be fulfilled, in the other case applies to third-party components such as extrusion structural features of the company building have to be considered. We take them all into account in the calculation and project planning.

If for example the available length is limited the drying ovens are placed above the Hinterkopf-machines. Hinterkopf as a general contractor. Individual solutions, Our experienced planners utilise an above average personal contact and perfect quality for an economic height by designing the accumulator higher than usual. Hinterkopf makes the optimum possible instead of making an idle compromise!

presses which are integrated in our production lines.

# **SERVICE**

"We take care of the important issues of our customers by using our extensive knowledge."

### **WELTWEITER SERVICE**

The Hinterkopf service department cultivates a relationship with the customer for an entire lifetime of the machine – and beyond this. Whatever you need: spare parts, reconstructions or revisions, you are always on the safe side!

The Hinterkopf specialists make improvements and revisions of production lines worldwide at customer sites or in the factory in Eislingen. The customer decides, Hinterkopf offers the individual service!

### **OVERVIEW OF OUR INSPECTION SERVICES:**

- System Diagnostics
- Spare parts in original equipment quality
- Maintenance and Repair
- Training
- Practical advice for operators
